
EDUCATION

- **University of California, Santa Cruz** Santa Cruz, CA
Master of Science in Computer Science; Advisor: Prof. Yi Zhang Sep. 2016 – Dec. 2017(*expected*)
 - **Major courses::** Algorithm Analysis, Image Processing and Computer Vision, Design Database Systems, Computational Model of Discourse and Dialog, Programming Languages
- **Zhejiang University** Hangzhou, China
Bachelor of Engineering in Computer Science; Advisor: Prof. Jian Wu Sep. 2010 – June. 2014
 - **Major courses::** C Programming, Database System, Data Structure, Artificial Intelligence, Software Architecture

EXPERIENCE

- **WithMe(Early Stage Startup)** Hangzhou, China
Full-Stack Developer Aug 2015 - Aug 2016
 - **Prototyping:** Fast built an MVP(a hybrid app) in days to verify key business assumptions.
 - **Leadership:** Successfully led the iOS dev team of 3 delivering high-quality apps on time. Provided data structure and algorithm training to all engineers of the company.
 - **ORM Component:** Developed a thread-safe ORM component WMCache based on SQLite3 and Objective-C runtime methods. It is still used as a fundamental component in apps developed by WithMe.
 - **Data Synchronization:** Designed the basic data synchronization strategy, and implemented a multi-observer listener component which has significantly reduced the complexity of data logic, and is still used as a fundamental component.
 - **A/B Test:** Implemented a configurable A/B test toolkit to collect and analysis user behaviors.
- **Alibaba** Hangzhou, China
Software Development Engineer Jun 2014 - May 2015
 - **Crowd-Sourcing Data Labeling System:** Built the whole system including front end and back end. Implemented a random pre-assignment mechanism to implement a high-performance task distribution system, handling over 1,000,000 labeled data per day with a single server.
 - **Search Engine Debug and Test Toolbox:** Built several internal tools including stress simulation, search engine pipeline visualization and search result evaluation for search algorithm groups.
- **University of California, Santa Barbara** Santa Barbara, CA
Visiting Research Assistant May 2013 - Oct 2013
 - **Open Information Extraction:** Identified the main reason existing extractors failed on complex sentences was that they wrongly parsed those nested sentences. Built a knowledge-graph-based natural language parser with Java with improved performance in our criminal report corpus.
 - **Knowledge Graph Visualization:** Built an interactive knowledge graph explorer and a graph query composer with JavaScript. Published a demo paper in SIGMOD 2014.

PROJECTS

- **Mini Database:** A relational database supports basic SQL grammars including *create table*, *create index*, *insert*, *delete*, and *select*. B+ tree was implemented as the indexing data structure. Built with C.
- **Remote Desktop:** Users are allowed to monitor their PC(a server software is required) in the website. Built with JavaScript and Delphi.
- **Personal News Radio:** An iOS app which recommends news to users based on implicit feedback. A reinforcement learning recommendation system was implemented.
- **Book Price Comparison Portal:** Price comparison website and search engine for Chinese books. Achieved 18,000 DAU / 1,000,000 pages indexed by Baidu. Stochastic DFS algorithm was utilized to recommend purchase strategies. Built with C# and JavaScript.

PROGRAMMING SKILLS

- **Languages:** C++, C#, Delphi, Python, SQL, JavaScript, Java, Objective-C
- **Technologies:** Unix/Linux, MySQL, MongoDB, Redis, TensorFlow, Yii, Apache, NGINX
